

PEHD5104 REMOTE SENSING AND GIS (3-0-0)

Fundamentals of Remote sensing: Concept of satellite remote sensing : Types of satellites: Sun-synchronous and geostationary satellites; Platforms and sensors; Stages of remote sensing; Electromagnetic radiation (EMR); Electromagnetic Spectrum; Interaction with atmosphere; interaction with the earth surface; Remote sensing sensors and their characteristics; Spectral signature; Types of resolutions; Satellite data types and their uses; IRS satellites series, LANDSAT series, IKONOS, Quick bird and WV; Remote sensing data acquisition. Fundamentals of GIS: Basic concepts of Geographic Information System; Concept of geoinformatics; Components of GIS; GIS data formats; Types of Data structure; spatial and non-spatial; Vector and raster data structure; Data models; tabular, hierarchical, network, relational, object oriented; Errors and accuracies in GIS. Spatial Data Input and analysis: Methods of data capture and input; Geo-referencing; Projection and datum; Coordinate transformation and re-sampling; Digitalization of maps and satellite images; Generation spatial data base; Attribute generation; Linking spatial and non-spatial data; Generation of thematic maps. Manipulation, Analysis and Output: Data manipulation techniques; Spatial data analysis; overlay operations and proximity analysis; Data interpolation; point and line data; Network analysis and suitability analysis; Creation of data base; contours, spot heights; 3D modeling; digital elevation models (DEM), slope and aspect; Query in GIS; Data output and presentation.
